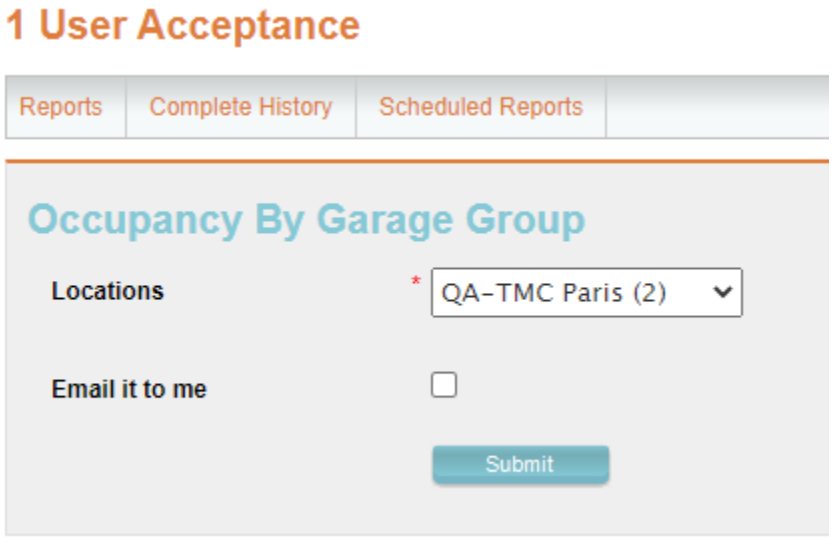
Logical Zone Garage Groups

Flash PARCS Configurations · https://qa.flashparking.com/docs/garage-groups/

Also known as: Logical Groups



This feature enables the ability to group Logical Zones into separate groups for reporting purposes. This feature is also called ***Logical Groups*.**

For example: The Texas Medical Center has about 20 Logical Zone garages, and TCH has 4 Logical Zone garages, so they can group several Logical Zones. This way they can separate the report results by groups.

How to Create a Garage Group

Dev is able to create Logical Zone groups and then link Logical Zones to that group, mostly for reporting purposes. Submit a JIRA Ticket (CS Task) requesting the Garage Group for the desired location.

The ticket must include:

- Name: This will be the Group ID, the name of the group to be displayed in the Admin Portal
- Location name: Company and location name the Garage Group will be added to.

How to Assign a Logical Zone to a Garage Group

- Once the Garage Group is added by Dev, the Group will become available in the Admin Portal.
- Go to the Logical Zones tab
- Select a Logical Zone
- Then, at the *Association* section under *Reporting Zones* **check off** the desired Garage Group and **Save**.

Available Reports

These are the Reports that can pull Garage Group data:

- Occupancy by Garage Group
