RegisterMemberCard (REST)

Monthly API Calls & Guide - REST · https://qa.flashparking.com/docs/registermembercard-rest/

RegisterMemberCard associates a member card with a specified member. Used to create, update, or delete an associated credit card, linked to a Monthly Account.

POST

POST /api/monthly/RegisterMemberCard

```
securityToken: "string"
```

```
{
  "AccountNumber": "string",
  "AccountNumberType": "string",
  "ActionType": "string",
  "CardHolder": "string",
  "CardNickname": "string",
  "CardType": "American_Express",
  "LastFour": "string",
  "Token": "string",
  "ZipCode": "string",
  "LocationId": "string"
}
```

Parameters

Value	Required Field	Description	Data Type

`securityToken`	Yes	We provide you with a security token in GUID format. Note that this security token will differ from location to location. Your security token for the Monthly API is *not* used globally across all locations. We will provide you with a different security token per each location you create monthly accounts for.	`string` (GUID format)
`AccountNumber`	Yes	You will provide an account number of the account you are adding the vehicle to. This must match the account number provided when creating the account using the MonthlyAccount call.	`string`
`AccountNumberType`	Yes	Third Party system generated unique value. This can match the account number in your system. This account number is external and different from the internal account number generated by the Flash Parking system. In order, to delete or update a monthly account generated by a third party system, this external **AccountNumber** will be required in the API request.	`string`
`ActionType`	Yes	The action type can be one of three values: `Add`, `Update`, or `Delete` (case-sensitive). **`Add`** will create a new monthly account with the details you provide. **`Update`** will update the details of the monthly account. **`Delete`** will deactivate the monthly account and clear access information as Prox Card/RFID, The ID Card, the ID Tag, Decal, and PIN.	`string` (`Add`, `Update`, or `Delete`)
`CardHolder`	Yes	A name to associate with the monthly account.	`string`

CardNickname		Optional value to reference a CC in your system. This allows the client to identify their own CC within some of our reports.	string
CardType	Yes	American_Express, Diners_Club, Discover, MasterCard, or Visa.	string
LastFour		A second line to the address to associate with the monthly account.	string
Token		Do not use unless directed by Flash Parking.	string
ZipCode	Yes	The zip code for the provided address.	string
LocationId	Yes	We provide you with a location ID in GUID format. The location ID corresponds with the location you are creating monthly accounts for.	string (GUID format)

Response

Example

```
{
  "Code": "Success",
  "Message": "string",
  "LocationProfiles": [
    {
      "UniqueID": "00000000-0000-0000-0000-000000000000",
      "Name": "string"
    }
  ]
}
```

Parameters

The response should include a **MonthlyAccountResult** object with the following data:

Field	Description
`Code`	If the request succeeded, the value of **RESULT_CODE** will be **Success**. If the request failed, a relevant error code will be provided.
`Message`	A message with clarifying information about the result is provided in this field.
