ParkMobile/ParkWhiz Integration Configuration

Integrations Configurations · https://qa.flashparking.com/docs/parkmobile-parkwhiz-integration-configuration/

Implementation

Once ParkMobile has completed all required forms, and all other location details are finalized:

Create Seller Account

Follow the steps in Confluence below to set up a new Seller account:

Page: ParkWhiz Admin | Seller Settings

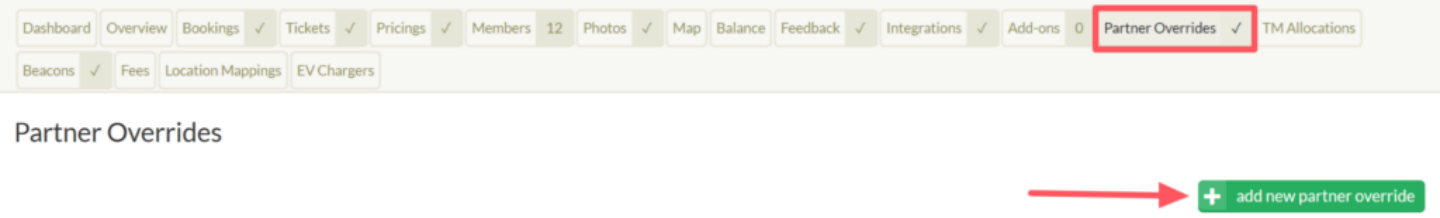

Add a New Location

Follow the steps in Confluence below to set up a new Location:

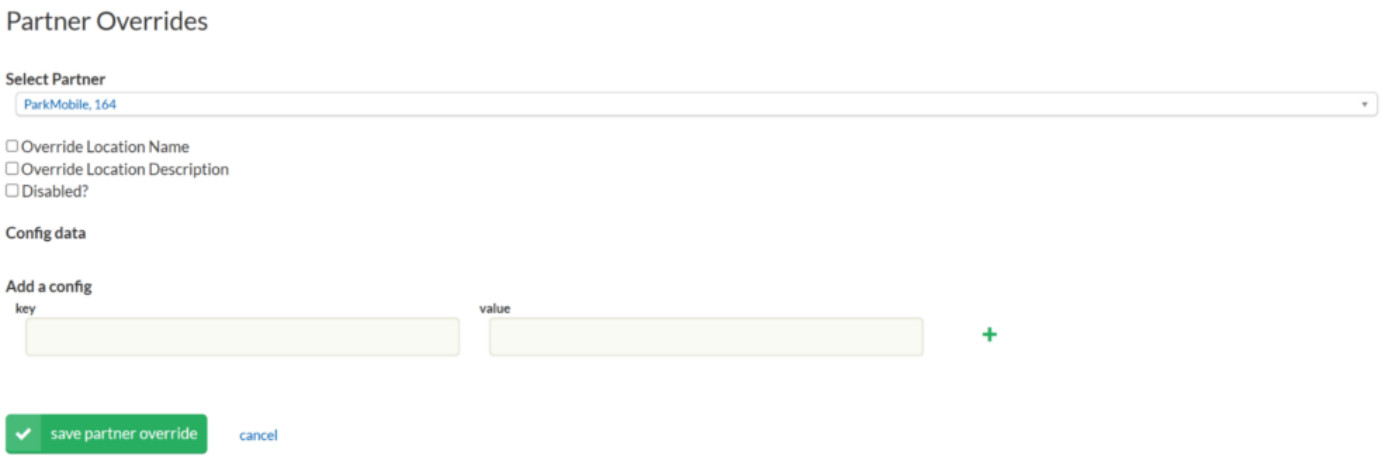

Page: ParkWhiz Admin | Location

Partner Override

1. Click on the **Partner Overrides** tab.
2. Add a new **Partner Override**.

3. Select Partner: **Parkmobile**.

4. Check **Disabled**.

Note

The **Disabled** setting is enabled to update a value in the ParkWhiz Admin Portal for the ParkMobile-specific location feed. During this time, the location no longer allows bookings or any sort of purchases. Any changes to the location settings need to be done while the location is *Disabled*. Once the changes are done, then "*Disabled*?" can be turned off, allowing ParkMobile to resume operations.

5. Get the **key** and **value** from ParkMobile.

- Hit the green "**plus**" when entering a new key and value before clicking "save partner override".

6. **Save Partner Override**.

Pricing & Event Package Build

ParkWhiz builds reservation rates, event packages, and blackout dates that match ParkMobile.
